

SUBJECT: AP0043 & AP0044 6.0 L Head Gasket Kits

Alliant Power has implemented a running change to the head gaskets included in the AP0043 and AP0044 6.0 L Ford® Power Stroke® Head Gasket Kits. The original head gasket design incorporated a black coating that completely covered the entire surface area of the gasket. The new design incorporates a similar black coating; however, the coating is only applied to the locations where it is required for sealing. Because this is a running change, existing stock of AP0043 and AP0044 kits should be used until depleted.

The two head gasket designs are shown below for visual reference.
